

METHOD FOR A CARRIER TO DETERMINE THE LOCATION OF A MISSING PERSON

Abstract Of The Invention

A method that enables a carrier to find the address of a missing person. The carrier accomplishes the foregoing by receiving the name of a missing person; receiving a list of parties that the missing person is likely to receive mail from or send mail to; scanning mail faces that have been deposited with the carrier by a sender; determining if the scanned mail includes the name of the missing person and a party appearing on the list of parties; producing a list of scanned names and addresses that include the name of the missing person and the party appearing on the list of parties; delivering the list to a party that is permitted by law to receive the list regarding the missing person; and reviewing the delivered list to determine if the missing person is the recipient or sender of mail that is likely to be the missing person.
